

Print out vside1 and vside2. Cut out the front part of the side and rear part of the side from the vside 1 drawing. Then cut out the center part of the side from the vside 2 drawing. Using the front and rear tabs on the drawings, tape them together into a single part. Then fabricate the two vertical stab parts from this pattern. The finished part should only have a 1 BID glass layup on the inside and unfinished foam on the outside. Make a right and left part.
